

Technical Writing Meeting with Edwin - 04/05/2020

- Ensure IEEE sourcing style
- Abbreviate journal titles

Meeting with Taico and Wesley - 04/05/2020

Fix in Project Planning:

- In the first part, sources go before the period
- Follow feedback
- Change Requirements to all have a uniform way of reading (all the same negation, no “should” in the Could Have section, etc.)
- In Planning, add that we need to take into account completing assignments and the report in our plans
- References end after section 3, add more (eg. SCRUM, framework decisions) to every claim
- In Risk section, acknowledge that it is a static web page (this was not clear) and which risks are associated with this (scalability)
- Requirements: have full sentences, not just “an SIR graph”
- Testing: add that Selenium has been investigated for integration testing, add this also to the Could Have section

Server/hosting options:

- Look into netlify and heroku
- Mirror to github and use github pages
