

Meeting Agenda 23/4/2020

Meeting with Tom and Aysun

Our plan build a web interface

- Use a plugin called Yaktor? includes conversation and domain modeling languages that allow you to define rich, event-driven interactions. These intuitive languages allow you to spend less time on implementation and more time on defining the relationships of your business entities.

Problems: scale have you ever seen web-based models most agent-modeling tools are not exportable, (eg. GAMA) Most online models are too simple, not reflective. scale and priorities: web (for visualization) vs native application (extensive, scalable predictive model)

Questions

- What is typically used in epidemic modeling?
- Any web tools?
- A huge problem is the scale, how do you deal with scale Multi-Level Agent based modeling
