Meeting Notes 20/4/2020
- Equation-based and agent-based => looking towards agent-based model
- Create a website with JavaScript and CSS (https://www.coronasimulator.com/ is a simple proof-of-concept that this is a feasible option) - Need to choose a data API (https://www.databronnencovid19.nl/ has a few options to explore)
- After MVP task list is created, we will claim tasks that interest us
-

Task Preferences
- Hans: interested in the model, open to helping with the UI
- Ji: interested in the model, open to helping on the backend with the server
- Victor: interested in working on the backend, open to UI and AI
- Yash: interested in working on the UI, open to help on the backend
- Brontë: interested in the model, open to helping with the UI

Actions:
- Research completed for Tuesday 21/4/2020
- Create tasks for MVP, which the preliminary list will be created on Tuesday (and moved to gitlab once the repository is set up)
- Call with TA at 18:30 - Ask about server possibilities (do not want to host ourselves, as this is against project requirements)
